Gene Summary	This gene encodes a multifunctional proinflammatory cytokine that belongs to the tumor necrosis f actor (TNF) superfamily. This cytokine is mainly secreted by macrophages. It can bind to, and thus functions through its receptors TNFRSF1A/TNFR1 and TNFRSF1B/TNFBR. This cytokine is invol ved in the regulation of a wide spectrum of biological processes including cell proliferation, differe ntiation, apoptosis, lipid metabolism, and coagulation. This cytokine has been implicated in a vari ety of diseases, including autoimmune diseases, insulin resistance, and cancer. Knockout studies in mice also suggested the neuroprotective function of this cytokine. [provided by RefSeq
