Gene Name	EMR4P
Gene Alias	EMR4, FIRE, GPR127, PGR16
Gene Description	egf-like module containing, mucin-like, hormone receptor-like 4 pseudogene
Gene Ontology	Hyperlink
Gene Summary	<p>This gene is a member of the EGF-TM7 receptor gene family which is thought to play a role in leukocyte adhesion and migration. In other vertebrates, including nonhuman primates, this gene encodes a protein containing N-terminal EGF domains and a C-terminal transmembrane domain. Sequence evidence for the human gene, however, indicates nucleotide deletion in the genomic sequence would result in frameshift and early termination of translation. A protein expressed by this gene would be soluble rather than expressed on the cell surface. As the encoded protein has not been detected, this gene may represent a transcribed pseudogene.
