

# Anti-Etanercept (Human) ELISA Kit (Qualitative)

Catalog # KA6802

Size 1 Kit

## Specification

|                     |                                                                                                                            |
|---------------------|----------------------------------------------------------------------------------------------------------------------------|
| Product Description | Etanercept (Human) ELISA Kit (Qualitative) is a qualitative determination of antibodies to etanercept in serum and plasma. |
| Suitable Sample     | Serum or Plasma                                                                                                            |
| Sample Volume       | 20 $\mu$ L                                                                                                                 |
| Absorbance (nm)     | 450/650 nm                                                                                                                 |
| Detection Method    | Colorimetric                                                                                                               |
| Assay Type          | Qualitative                                                                                                                |
| Reactivity          | Human                                                                                                                      |
| Regulatory Status   | For research use only (RUO)                                                                                                |
| Storage Instruction | Store the kit at 4°C.                                                                                                      |

## Applications

- Qualitative

## Gene Info — TNFRSF1A

|                  |                                                                                                     |

| Gene Description | tumor necrosis factor receptor superfamily, member 1A                                               |

Omim ID [142680 191190](#)

Gene Ontology [Hyperlink](#)

**Gene Summary**

The protein encoded by this gene is a member of the TNF-receptor superfamily. This protein is one of the major receptors for the tumor necrosis factor-alpha. This receptor can activate NF-kappa B, mediate apoptosis, and function as a regulator of inflammation. Antiapoptotic protein BCL2-associated athanogene 4 (BAG4/SODD) and adaptor proteins TRADD and TRAF2 have been shown to interact with this receptor, and thus play regulatory roles in the signal transduction mediated by the receptor. Germline mutations of the extracellular domains of this receptor were found to be associated with the autosomal dominant periodic fever syndrome. The impaired receptor clearance is thought to be a mechanism of the disease. [provided by RefSeq]
