Entrez GeneID	53
GeneBank Accession#	BC003160.1
Protein Accession#	AAH03160.1
Gene Name	ACP2
Gene Alias	-
Gene Description	acid phosphatase 2, lysosomal
Omim ID	171650
Gene Ontology	Hyperlink
Gene Summary	This gene encodes the beta subunit of lysosomal acid phosphatase (LAP). LAP is chemically and genetically distinct from red cell acid phosphatase. The encoded protein belongs to a family of dis tinct isoenzymes which hydrolyze orthophosphoric monoesters to alcohol and phosphate. Mutatio ns in this gene or in the related alpha subunit gene cause acid phosphatase deficiency. Multiple al ternatively spliced transcript variants encoding different isoforms have been identified for this gen e. [provided by RefSeq
