| **Entrez GeneID** | 354 |
| **Protein Accession#** | P07288 |
| **Gene Name** | KLK3 |
| **Gene Alias** | APS, KLK2A1, PSA, hK3 |
| **Gene Description** | kallikrein-related peptidase 3 |
| **Omim ID** | 176820 |
| **Gene Ontology** | Hyperlink |
| **Gene Summary** | Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing ev idence suggests that many kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. This gene is one of the fifteen kallikrein subfamily members located in a cluster on chromosome 19. Its protein product is a protease present in sem inal plasma. It is thought to function normally in the liquefaction of seminal coagulum, presumably b y hydrolysis of the high molecular mass seminal vesicle protein. Serum level of this protein, called PSA in the clinical setting, is useful in the diagnosis and monitoring of prostatic carcinoma. Altern ate splicing of this gene generates several transcript variants encoding different isoforms. [provid ed by RefSeq |
