IFNG (Human) Recombinant Protein

Catalog # P5817 Size 100 ug, 50 ug, 10 ug

Applications

Result of activity analysis

Result of activity analysis

Specification

Product Description	Human IFNG (143 a.a.) full-length recombinant protein with His tag expressed in Barley grain (*Horde um vulgare*).
Host	Plants
Theoretical MW (kDa)	25, 27
Form	Lyophilized
Preparation Method	Barley grain (*Hordeum vulgare*) expression system
Purification	Chromatography
Concentration	100 ug/mL

Copyright © 2023 Abnova Corporation. All Rights Reserved.

Purity	> 98% by SDS-PAGE
Endotoxin Level	Endotoxin level is less than 0.005ng per ug protein (0.05EU/ug) as measured by turbidimetric kinetic assay
Activity	The ED_{50} is determined by the dose-dependent cytostatic effects of serial dilutions of IFNG in the presence of TNF-alpha, on HT-29 (human carcinoma) cells. The ED_{50} is typically below 5 ng/mL. This lot has ED_{50} 2.7-4.1 ng/mL.
Quality Control Testing	SDS-PAGE Stained with Coomassie Blue
Storage Buffer	Lyophilized from PBS, pH 7.4
Storage Instruction	Store at -20°C on dry atmosphere. After reconstitution with sterile water to a concentration of no less than 100 ug/mL, store at -20°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Aliquot to avoid repeated freezing and thawing.
Note	Result of activity analysis Result of activity analysis

Applications

- Functional Study
- SDS-PAGE

Gene Info — IFNG

Entrez GeneID	3458
Protein Accession#	NP_000610.2
Gene Name	IFNG
Gene Alias	IFG, IFI
Gene Description	interferon, gamma
Omim ID	147570 191100 607948 609135 609423
Gene Ontology	Hyperlink

Gene Summary	Interferon-gamma (IFNG), or type II interferon, is a cytokine critical for innate and adaptive immunity against viral and intracellular bacterial infections and for tumor control. Aberrant IFNG expression is associated with a number of autoinflammatory and autoimmune diseases. The importance of IFNG in the immune system stems in part from its ability to inhibit viral replication directly, but most importantly derives from its immunostimulatory and immunomodulatory effects. IFNG is produced predominantly by natural killer (NK) and natural killer T (NKT) cells as part of the innate immune response, and by CD4 (MIM 186940) and CD8 (see MIM 186910) cytotoxic T lymphocyte (CTL) effector T cells once antigen-specific immunity develops (Schoenborn and Wilson, 2007 [PubMed 17981204]).[supplied by OMIM
Other Designations	-

Pathway

- Allograft rejection
- Cytokine-cytokine receptor interaction
- Graft-versus-host disease
- Jak-STAT signaling pathway
- Natural killer cell mediated cytotoxicity
- Proteasome
- Regulation of autophagy
- Systemic lupus erythematosus
- T cell receptor signaling pathway
- TGF-beta signaling pathway
- Type I diabetes mellitus

Disease

- Abortion
- Abscess
- Acquired Immunodeficiency Syndrome
- Acute Disease
