Bioactive | CellTx™ | GMP Grade

IL2 (Human) Recombinant Protein

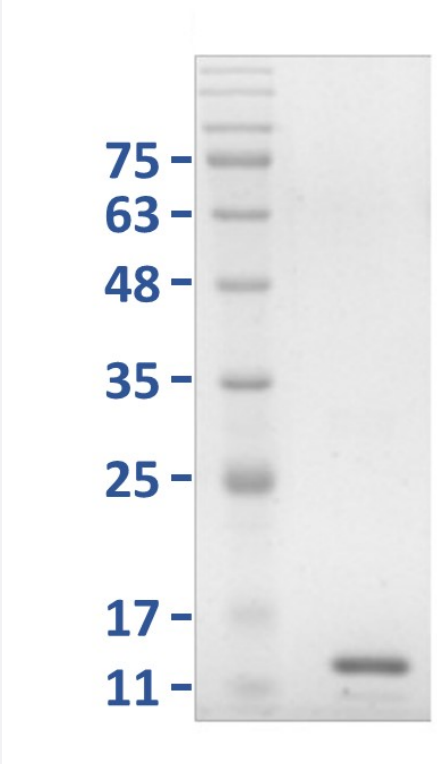

Catalog # P6993 Size 100 ug

Applications

Functional Study

The ED_{50} for this effect is < 3 ng/mL, measured by the induction of proliferation in CTLL-2 cells.

Specification

Product Description	Human IL2 recombinant protein with His tag expressed in *Escherichia coli*.
Host	Escherichia coli
Theoretical MW (kDa)	Calculated MW: 16.4
Form	Lyophilized
Preparation Method	*Escherichia coli* expression system
Purification	Ni-NTA chromatography
Purity	> 97% by SDS-PAGE
Endotoxin Level	< 0.05 EU/ug
Activity	The ED_{50} for this effect is < 3 ng/mL, measured by the induction of proliferation in CTLL-2 cells. The specific activity of recombinant human IL-2 is > 5 x 10^6 IU/mg, which is calibrated against the human IL-2 WHO International Standard (NIBSC code: 86/500).
Quality Control Testing	SDS-PAGE Stained with Coomassie Blue
Recommend Usage	SDS-PAGE The optimal working dilution should be determined by the end user.
Regulatory Status	GMP grade
Storage Buffer	Lyophilized from NaPi buffer, 0.018% SDS, pH 7.5. Reconstitute the lyophilized protein in sterile H_2O to a concentration of at least 0.5 mg/mL and incubate the stock solution for at least 20 min to ensure sufficient redissolution. Please use the protein within one month after reconstitution.
Storage Instruction	Store at -20°C for 12 months in lyophilized state. After reconstitution with deionized water, store at -20 or -80°C for 1 month. Aliquot to avoid repeated freezing and thawing.

Applications

- Functional Study

  The ED_{50} for this effect is < 3 ng/mL, measured by the induction of proliferation in CTLL-2 cells.

- SDS-PAGE

Gene Info — IL2

Entrez GeneID	3558
Gene Name	IL2
Gene Alias	IL-2, TCGF, lymphokine
Gene Description	interleukin 2
Omim ID	147680
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a secreted cytokine that is important for the proliferation of T and B lymphocytes. The receptor of this cytokine is a heterotrimeric protein complex whose gam ma chain is also shared by interleukin 4 (IL4) and interleukin 7 (IL7). The expression of this gene i n mature thymocytes is monoallelic, which represents an unusual regulatory mode for controlling th e precise expression of a single gene. The targeted disruption of a similar gene in mice leads to ulcerative colitis-like disease, which suggests an essential role of this gene in the immune respon se to antigenic stimuli. [provided by RefSeq
Other Designations	T cell growth factor|aldesleukin|interleukin-2|involved in regulation of T-cell clonal expansion
