## Gene Info — PTK2

|---|---|
| **Entrez GeneID** | 5747 |
| **Protein Accession#** | Q05397 |
| **Gene Name** | PTK2 |
| **Gene Alias** | FADK, FAK, FAK1, pp125FAK |
| **Gene Description** | PTK2 protein tyrosine kinase 2 |
| **Omim ID** | 600758 |
| **Gene Ontology** | Hyperlink |
| **Gene Summary** | This gene encodes a cytoplasmic protein tyrosine kinase which is found concentrated in the focal adhesions that form between cells growing in the presence of extracellular matrix constituents. Th e encoded protein is a member of the FAK subfamily of protein tyrosine kinases but lacks signific ant sequence similarity to kinases from other subfamilies. Activation of this gene may be an impor tant early step in cell growth and intracellular signal transduction pathways triggered in response t o certain neural peptides or to cell interactions with the extracellular matrix. At least four transcript variants encoding four different isoforms have been found for this gene, but the full-length natures of only two of them have been determined. [provided by RefSeq |
