| **Gene Ontology** | Hyperlink |
| **Gene Summary** | This gene encodes the microtubule-associated protein tau (MAPT) whose transcript undergoes c omplex, regulated alternative splicing, giving rise to several mRNA species. MAPT transcripts are differentially expressed in the nervous system, depending on stage of neuronal maturation and ne uron type. MAPT gene mutations have been associated with several neurodegenerative disorder s such as Alzheimer's disease, Pick's disease, frontotemporal dementia, cortico-basal degenerat ion and progressive supranuclear palsy.
