Human EGFR scFv-TM-4-1BB-CD3z

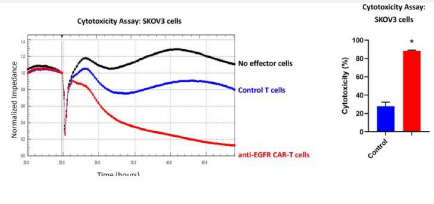

Catalog # U1034 Size 1 Tub

Applications

Flow Cytometry

The majority of CAR-T cells express the anti-EGFR CAR, detected with labeled EGFR protein.

Cytotoxicity

CAR-T cells are significantly more cytotoxic than control T cells for SKOV3 tumor cells endogenously expressing EGFR (p=0.0002 by t test).

FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES OR THERAPEUTIC APPLICATIONS.

CAR Structure

CAR domains. scFv: single chain variable fragment; TM: transmembrane domain.

Specification

Product Description	Human CAR-T cells express an anti-EGFR CAR containing an EGFR-specific scFv, hinge and trans membrane domains, the 4-1BB costimulatory domain and the CD3zeta activation domain.

Gene Summary	The protein encoded by this gene is a transmembrane glycoprotein that is a member of the protei n kinase superfamily. This protein is a receptor for members of the epidermal growth factor family. EGFR is a cell surface protein that binds to epidermal growth factor. Binding of the protein to a lig and induces receptor dimerization and tyrosine autophosphorylation and leads to cell proliferation . Mutations in this gene are associated with lung cancer.
