Bioactive

VEGFA (Human) Recombinant Protein

Catalog # P7145 Size 10 ug

Applications

Result of bioactivity analysis

Result of bioactivity analysis

Specification

Product Description	Human VEGFA (P15692-4, 27 a.a. - 191 a.a.) partial recombinant protein expressed in *Pichia pastoris*.
Sequence	APMAEGGGQNHHEVVKFMDVYQRSYCHPIETLVDIFQEYPDEIEYIFKPSCVPLMRCGGCCNDEG LECVPTEESNITMQIMRIKPHQGQHIGEMSFLQHNKCECRPKKDRARQEKKSVRGKGKGQKRKR KKSRYKSWSVYVGARCCLMPWSLPGPHPCGPCSERR
Host	Yeast
Theoretical MW (kDa)	38-40, 18-20
Form	Lyophilized
Preparation Method	*Pichia pastoris* expression system

Purity	> 95% by SDS-PAGE
Endotoxin Level	< 0.5 EU per 1 ug of protein (determined by gel clotting method)
Activity	The ED_{50} was determined by the dose-dependent stimulation of proliferation of HUVEC cells is 1.0 - 5.0 ng/ml, corresponding to a specific activity of 2.0 x 10^5 - 1.0 x 10^6units/mg.
Quality Control Testing	2 ug protein in Reducing and Non-Reducing SDS PAGE Stained with Coomassie Blue
Storage Buffer	Lyophilized from sterile distilled Water up to 100 ug/ml
Storage Instruction	Store at 4°C to 8°C for 1 week. For long term storage store at -20°C to -80°C. Aliquot to avoid repeated freezing and thawing.
Note	Result of bioactivity analysis Result of bioactivity analysis

Applications

- Functional Study
- SDS-PAGE

Gene Info — VEGFA

Entrez GeneID	7422
Protein Accession#	P15692-4
Gene Name	VEGFA
Gene Alias	MGC70609, VEGF, VEGF-A, VPF
Gene Description	vascular endothelial growth factor A
Omim ID	125853 192240
Gene Ontology	Hyperlink

Gene Summary	This gene is a member of the PDGF/VEGF growth factor family and encodes a protein that is often found as a disulfide linked homodimer. This protein is a glycosylated mitogen that specifically acts on endothelial cells and has various effects, including mediating increased vascular permeability, inducing angiogenesis, vasculogenesis and endothelial cell growth, promoting cell migration, and inhibiting apoptosis. Elevated levels of this protein is linked to POEMS syndrome, also known as Crow-Fukase syndrome. Mutations in this gene have been associated with proliferative and nonproliferative diabetic retinopathy. Alternatively spliced transcript variants, encoding either freely secreted or cell-associated isoforms, have been characterized. There is also evidence for the use of non-AUG (CUG) translation initiation sites upstream of, and in-frame with the first AUG, leading to additional isoforms. [provided by RefSeq
Other Designations	vascular endothelial growth factor isoform VEGF165|vascular permeability factor
