Entrez GeneID	52
Gene Name	ACP1
Gene Alias	HAAP, MGC111030, MGC3499
Gene Description	acid phosphatase 1, soluble

Gene Summary	The product of this gene belongs to the phosphotyrosine protein phosphatase family of proteins. It functions as an acid phosphatase and a protein tyrosine phosphatase by hydrolyzing protein tyros ine phosphate to protein tyrosine and orthophosphate. This enzyme also hydrolyzes orthophospho ric monoesters to alcohol and orthophosphate. This gene is genetically polymorphic, and three co mmon alleles segregating at the corresponding locus give rise to six phenotypes. Each allele app ears to encode at least two electrophoretically different isozymes, Bf and Bs, which are produced in allele-specific ratios. Multiple alternatively spliced transcript variants encoding distinct isoforms have been identified for this gene. [provided by RefSeq
