Gene Info — VEGFA

Entrez GeneID	7422
Gene Name	VEGFA
Gene Alias	MGC70609, VEGF, VEGF-A, VPF
Gene Description	vascular endothelial growth factor A
Omim ID	125853 192240
Gene Ontology	Hyperlink
Gene Summary	This gene is a member of the PDGF/VEGF growth factor family and encodes a protein that is ofte n found as a disulfide linked homodimer. This protein is a glycosylated mitogen that specifically a cts on endothelial cells and has various effects, including mediating increased vascular permeabil ity, inducing angiogenesis, vasculogenesis and endothelial cell growth, promoting cell migration, and inhibiting apoptosis. Elevated levels of this protein is linked to POEMS syndrome, also know n as Crow-Fukase syndrome. Mutations in this gene have been associated with proliferative and nonproliferative diabetic retinopathy. Alternatively spliced transcript variants, encoding either freel y secreted or cell-associated isoforms, have been characterized. There is also evidence for the u se of non-AUG (CUG) translation initiation sites upstream of, and in-frame with the first AUG, lead ing to additional isoforms. [provided by RefSeq
Other Designations	vascular endothelial growth factor isoform VEGF165|vascular permeability factor
