# HLA-A25/HLA-Aw32 monoclonal antibody, clone SPM418

Catalog # MAB13069 Size 100 ug

## Applications

### Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical staining (Formalin-fixed paraffin-embedded sections) of human tonsil with HLA-A25/HLA-Aw32 monoclonal antibody, clone SPM418 (Cat # MAB13069).

## Specification

| | |
|---|---|
| **Product Description** | Mouse monoclonal antibody raised against native human HLA-A25/HLA-Aw32. |
| **Immunogen** | Normal human peripheral blood lymphocytes of phenotype A1, Aw32, B7, B37, Cw-, Cw-, DR2, DRw 10. |
| **Host** | Mouse |
| **Reactivity** | Human |
| **Specificity** | This monoclonal antibody reacts with cells bearing HLA-A25 or HLA-Aw32 antigens. In addition, a re action was observed with a cell of phenotype A2, Aw31; B17, Bw49. HLA-A, with HLA-B and HLA-C, belongs to major histocompatibility complex (MHC) class I antigens and expresses constitutively on a ll nucleated cells. HLA system comprises closely linked genes controlling highly polymorphic proteins involved in the presentation of peptides to the T cell receptor, inhibition of NK cell cytotoxicity, and rej ection of tissue allotransplantation. Specific alleles at HLA loci are associated with diseases. This an tibody is specifically applicable for typing peripheral T cells for the antigens HLA-A25 and HLA-Aw32 . |
| **Form** | Liquid |
| **Purification** | Protein A/G purification |
| **Isotype** | IgG2a, kappa |

Copyright © 2023 Abnova Corporation. All Rights Reserved.

| | |
|---|---|
| **Recommend Usage** | Flow Cytometry (0.5-1 ug/$10^6$ cells in 0.1 mL)<br>Immunofluorescence (0.5-1 ug/mL)<br>Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections) (0.5-1 ug/mL)<br>The optimal working dilution should be determined by the end user. |
| **Storage Buffer** | In 10 mM PBS (0.05% BSA, 0.05% sodium azide). |
| **Storage Instruction** | Store at 4°C. |
| **Note** | This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which shoul d be handled by trained staff only. |

## Applications

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

  Immunohistochemical staining (Formalin-fixed paraffin-embedded sections) of human tonsil with HLA-A25/HLA-Aw32 monoclonal antibody, clone SPM418 (Cat # MAB13069).

- Immunofluorescence

- Flow Cytometry

## Gene Info — HLA-A

| | |
|---|---|
| **Entrez GeneID** | 3105 |
| **Protein Accession#** | P01889;P30443;P30499 |
| **Gene Name** | HLA-A |
| **Gene Alias** | HLAA |
| **Gene Description** | major histocompatibility complex, class I, A |
| **Omim ID** | 106300 142800 608579 |
| **Gene Ontology** | Hyperlink |

| | |
|---|---|
| **Gene Summary** | HLA-A belongs to the HLA class I heavy chain paralogues. This class I molecule is a heterodimer consisting of a heavy chain and a light chain (beta-2 microglobulin). The heavy chain is anchored in the membrane. Class I molecules play a central role in the immune system by presenting peptides derived from the endoplasmic reticulum lumen. They are expressed in nearly all cells. The heavy chain is approximately 45 kDa and its gene contains 8 exons. Exon 1 encodes the leader peptide, exons 2 and 3 encode the alpha1 and alpha2 domains, which both bind the peptide, exon 4 encodes the alpha3 domain, exon 5 encodes the transmembrane region, and exons 6 and 7 encode the cytoplasmic tail. Polymorphisms within exon 2 and exon 3 are responsible for the peptide binding specificity of each class one molecule. Typing for these polymorphisms is routinely done for bone marrow and kidney transplantation. Hundreds of HLA-A alleles have been described. [provided by RefSeq |
| **Other Designations** | HLA class I histocompatibility antigen, A-23 alpha chain\|MHC class I antigen HLA-A heavy chain\|MHC leukocyte antigen\|OTTHUMP00000161059\|antigen presenting molecule\|leucocyte antigen class I\|leukocyte antigen class I-A |

## Gene Info — HLA-B

| | |
|---|---|
| **Entrez GeneID** | 3106 |
| **Protein Accession#** | P01889;P30443;P30499 |
| **Gene Name** | HLA-B |
| **Gene Alias** | AS, HLA-B-7301, HLA-B73, HLAB, HLAC, SPDA1 |
| **Gene Description** | major histocompatibility complex, class I, B |
| **Omim ID** | 106300 142830 608579 |
| **Gene Ontology** | Hyperlink |
| **Gene Summary** | HLA-B belongs to the HLA class I heavy chain paralogues. This class I molecule is a heterodimer consisting of a heavy chain and a light chain (beta-2 microglobulin). The heavy chain is anchored in the membrane. Class I molecules play a central role in the immune system by presenting peptides derived from the endoplasmic reticulum lumen. They are expressed in nearly all cells. The heavy chain is approximately 45 kDa and its gene contains 8 exons. Exon 1 encodes the leader peptide, exon 2 and 3 encode the alpha1 and alpha2 domains, which both bind the peptide, exon 4 encodes the alpha3 domain, exon 5 encodes the transmembrane region and exons 6 and 7 encode the cytoplasmic tail. ## Gene Info — HLA-C

| | |
|---|---|
| **Entrez GeneID** | 3107 |
| **Protein Accession#** | P01889;P30443;P30499 |
| **Gene Name** | HLA-C |
| **Gene Alias** | D6S204, FLJ27082, HLA-Cw, HLA-Cw12, HLA-JY3, HLC-C, PSORS1 |
| **Gene Description** | major histocompatibility complex, class I, C |
| **Omim ID** | 142840 177900 |
| **Gene Ontology** | Hyperlink |
| **Gene Summary** | HLA-C belongs to the HLA class I heavy chain paralogues. This class I molecule is a heterodimer consisting of a heavy chain and a light chain (beta-2 microglobulin). The heavy chain is anchored i n the membrane. Class I molecules play a central role in the immune system by presenting peptid es derived from endoplasmic reticulum lumen. They are expressed in nearly all cells. The heavy ch ain is approximately 45 kDa and its gene contains 8 exons. Exon one encodes the leader peptide , exons 2 and 3 encode the alpha1 and alpha2 domain, which both bind the peptide, exon 4 enco des the alpha3 domain, exon 5 encodes the transmembrane region, and exons 6 and 7 encode th e cytoplasmic tail. Polymorphisms within exon 2 and exon 3 are responsible for the peptide bindin g specificity of each class one molecule. Typing for these polymorphisms is routinely done for bon e marrow and kidney transplantation. Over one hundred HLA-C alleles have been described [prov ided by RefSeq |
| **Other Designations** | HLA class I antigen\|HLA class I heavy chain\|HLA class I histocompatibility antigen, C alpha chain\| HLA-C (Cw*1201)\|HLA-Cw*050x\|MHC class I HLA-C\|MHC class I HLA-Cw*0803\|MHC class I ant igen HLA-C\|MHC class I antigen heavy chain HLA-C\|MHC class I protein HLA |
