TP53 monoclonal antibody, clone S11-K

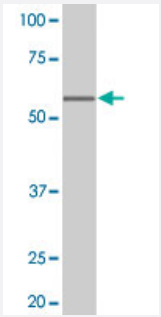

Catalog # MAB1626 Size 50 uL

Applications

Immunofluorescence

Immunofluorescence staining of HEK293 cells with TP53 monoclonal antibody, clone S11-K (Cat # MAB1626) at 1:200 dilution.

Western Blot (Tissue lysate)

TP53 monoclonal antibody, clone S11-K (Cat # MAB1626). Western blot of TP53 in mouse brain crude lysate (50 ug of protein loaded).

Specification

Product Description	Rabbit monoclonal antibody raised against synthetic peptide of TP53.
Immunogen	A synthetic peptide corresponding to C-terminus of human TP53.
Host	Rabbit
Reactivity	Human, Mouse, Rat
Form	Liquid
Isotype	IgG
Quality Control Testing	Antibody Reactive Against Synthetic Peptide.

Copyright © 2023 Abnova Corporation. All Rights Reserved.

Recommend Usage	Western Blot (1:2000) ELISA (1:10000-1:20000) The optimal working dilution should be determined by the end user.
Storage Buffer	In 20 mM Tris-HCl, pH 8.0 (10 mg/mL BSA, 0.05% sodium azide)
Storage Instruction	Store at 4°C.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which shoul d be handled by trained staff only.

Applications

- Immunofluorescence

  Immunofluorescence staining of HEK293 cells with TP53 monoclonal antibody, clone S11-K (Cat # MAB1626) at 1:200 dilution.

- Enzyme-linked Immunoabsorbent Assay

- Immunoprecipitation

- Western Blot (Tissue lysate)

  TP53 monoclonal antibody, clone S11-K (Cat # MAB1626). Western blot of TP53 in mouse brain crude lysate (50 ug of protein loaded).

Gene Info — TP53

Entrez GeneID	7157
Gene Name	TP53
Gene Alias	FLJ92943, LFS1, TRP53, p53
Gene Description	tumor protein p53
Omim ID	114480 114500 114550 151623 161550 191170 202300 260350
Gene Ontology	Hyperlink

Gene Summary	This gene encodes tumor protein p53, which responds to diverse cellular stresses to regulate target genes that induce cell cycle arrest, apoptosis, senescence, DNA repair, or changes in metabolism. p53 protein is expressed at low level in normal cells and at a high level in a variety of transformed cell lines, where it's believed to contribute to transformation and malignancy. p53 is a DNA-binding protein containing transcription activation, DNA-binding, and oligomerization domains. It is postulated to bind to a p53-binding site and activate expression of downstream genes that inhibit growth and/or invasion, and thus function as a tumor suppressor. Mutants of p53 that frequently occur in a number of different human cancers fail to bind the consensus DNA binding site, and hence cause the loss of tumor suppressor activity. Alterations of this gene occur not only as somatic mutations in human malignancies, but also as germline mutations in some cancer-prone families with Li-Fraumeni syndrome. Multiple p53 variants due to alternative promoters and multiple alternative splicing have been found. These variants encode distinct isoforms, which can regulate p53 transcriptional activity. [provided by RefSeq
Other Designations	p53 antigen|p53 transformation suppressor|p53 tumor suppressor|phosphoprotein p53|transformation-related protein 53
