Gene Info — FUS

Entrez GeneID	2521
Gene Name	FUS
Gene Alias	CHOP, FUS-CHOP, FUS1, TLS, TLS/CHOP, hnRNP-P2
Gene Description	fusion (involved in t(12;16) in malignant liposarcoma)
Omim ID	137070
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a multifunctional protein component of the heterogeneous nuclear ribonucleoprotein (hnRNP) complex. The hnRNP complex is involved in pre-mRNA splicing and the export of fully processed mRNA to the cytoplasm. This protein belongs to the FET family of RNA-binding proteins which have been implicated in cellular processes that include regulation of gene expression, maintenance of genomic integrity and mRNA/microRNA processing. Alternative splicing results in multiple transcript variants. Defects in this gene result in amyotrophic lateral sclerosis type 6. [provided by RefSeq
