Her2 (Human) Recombinant Protein

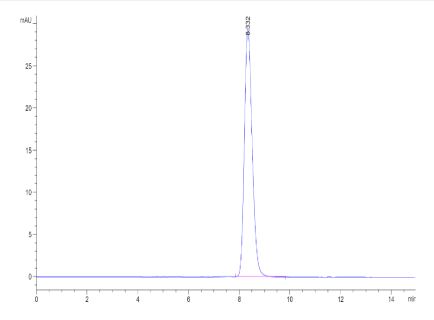

Catalog # P11151 Size 100 ug

Applications

Enzyme-linked Immunoabsorbent Assay

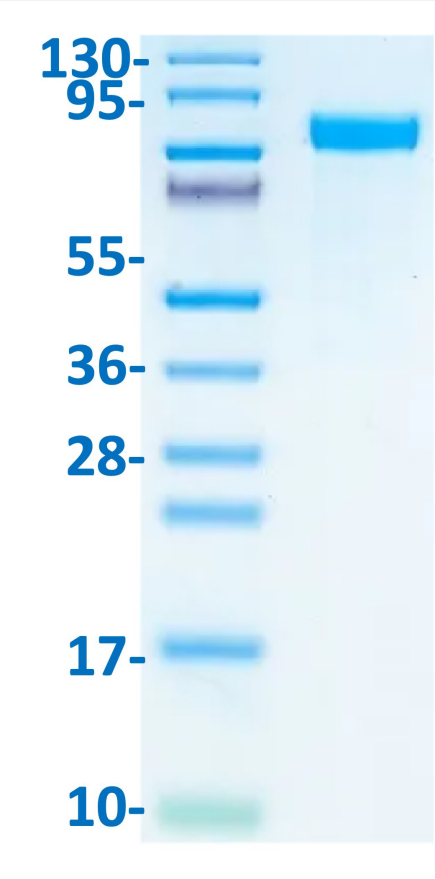

Immobilized Human Her2, His Tag at 0.5 ug/mL (100 uL/well) on the plate. Dose response curve for Anti-HER2 Antibody, hFc Tag with the EC_{50} of 5.6 ng/mL determined by ELISA.

High Performance Liquid Chromatography

The purity of Human Her2 is greater than 95% as determined by SEC-HPLC.

Bis-Tris PAGE

Human Her2 on Bis-Tris PAGE under reduced condition. The purity is greater than 95%.

Specification

Product Description	Human Her2 (P04626-1, Thr23-Thr652) partial recombinant protein with His tag at the C-Terminus expressed in HEK373 cells.
Sequence	Thr23-Thr652
Host	Human
Theoretical MW (kDa)	70.95999999999999
Reactivity	Human
Form	Lyophilized
Preparation Method	Mammalian cell (HEK293) expression system
Purity	> 95% by Tris-Bis PAGE > 95% by HPLC
Endotoxin Level	< 0.01 EU per 1 ug as determined by the LAL method.
Activity	The EC_{50} was 5.6 ng/mL determined by ELISA.

Recommend Usage	Biological Activity ELISA Tris-Bis PAGE SEC-HPLC The optimal working dilution should be determined by the end user.
Storage Buffer	Lyophilized from 0.22 um filtered solution in PBS (pH 7.4). Normally 8% trehalose is added as protec tant before lyophilization.
Storage Instruction	Store at -20°C for 12 months. After reconstitution, store at 4°C for 2-7 days, or store at -80°C for 3-6 months. Aliquot to avoid repeated freezing and thawing.
Note	Please use within one month after protein reconstitution.

Applications

- Functional Study
- Enzyme-linked Immunoabsorbent Assay

  Immobilized Human Her2, His Tag at 0.5 ug/mL (100 uL/well) on the plate. Dose response curve for Anti-HER2 Antibody, hFc Tag with the EC_{50} of 5.6 ng/mL determined by ELISA.
- High Performance Liquid Chromatography

  The purity of Human Her2 is greater than 95% as determined by SEC-HPLC.

Gene Info — ERBB2

Entrez GeneID	2064
Protein Accession#	P04626-1
Gene Name	ERBB2
Gene Alias	CD340, HER-2, HER-2/neu, HER2, NEU, NGL, TKR1
Gene Description	v-erb-b2 erythroblastic leukemia viral oncogene homolog 2, neuro/glioblastoma derived oncogen e homolog (avian)
Omim ID	137215 137800 164870 211980
Gene Ontology	Hyperlink

Gene Summary	This gene encodes a member of the epidermal growth factor (EGF) receptor family of receptor tyrosine kinases. This protein has no ligand binding domain of its own and therefore cannot bind growth factors. However, it does bind tightly to other ligand-bound EGF receptor family members to form a heterodimer, stabilizing ligand binding and enhancing kinase-mediated activation of downstream signalling pathways, such as those involving mitogen-activated protein kinase and phosphatidylinositol-3 kinase. Allelic variations at amino acid positions 654 and 655 of isoform a (positions 624 and 625 of isoform b) have been reported, with the most common allele, Ile654/Ile655, shown here. Amplification and/or overexpression of this gene has been reported in numerous cancers, including breast and ovarian tumors. Alternative splicing results in several additional transcript variants, some encoding different isoforms and others that have not been fully characterized. [provided by RefSeq
