Bioactive

IFNG (Human) Recombinant Protein

Catalog # P6956 Size 100 ug

Applications

Result of bioactivity analysis

Result of bioactivity analysis

IFNG (Human) Recombinant Protein stimulates cytotoxicity of the WiDr human colon colorectal adenocarcinoma cells. The ED50 range ≤ 5 ng/mL.

Specification

Product Description	Human IFNG (NP_000610, 24 a.a. - 161 a.a.) partial recombinant protein with His tag expressed in *Escherichia coli*.
Host	Human
Theoretical MW (kDa)	18.4
Form	Liquid
Preparation Method	*Escherichia coli* expression system
Purity	> 90% by SDS-PAGE
Endotoxin Level	> 1 EU per 1ug of protein (determined by LAL method)

Copyright © 2023 Abnova Corporation. All Rights Reserved.

Activity	Measured in a cytotoxicity assay using WiDr human colon colorectal adenocarcinoma cells. The ED_{50} range ≤ 5 ng/ml.
Quality Control Testing	3ug by SDS-PAGE under reducing condition and visualized by coomassie blue stain.
Recommend Usage	SDS-PAGE The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS, pH 7.4 (20% glycerol)
Storage Instruction	Stored at 2°C to 8°C for 1 week. For long term storage, aliquot and store at -20°C to -80°C. Avoid repeated freezing and thawing cycles.
Note	Result of bioactivity analysis Result of bioactivity analysis IFNG (Human) Recombinant Protein stimulates cytotoxicity of the WiDr human colon colorectal aden ocarcinoma cells. The ED50 range ≤ 5 ng/mL.

Applications

- SDS-PAGE

Gene Info — IFNG

Entrez GeneID	3458
Protein Accession#	NP_000610
Gene Name	IFNG
Gene Alias	IFG, IFI
Gene Description	interferon, gamma
Omim ID	147570 191100 607948 609135 609423
Gene Ontology	Hyperlink

Gene Summary	Interferon-gamma (IFNG), or type II interferon, is a cytokine critical for innate and adaptive immunity against viral and intracellular bacterial infections and for tumor control. Aberrant IFNG expression is associated with a number of autoinflammatory and autoimmune diseases. The importance of IFNG in the immune system stems in part from its ability to inhibit viral replication directly, but most importantly derives from its immunostimulatory and immunomodulatory effects. IFNG is produced predominantly by natural killer (NK) and natural killer T (NKT) cells as part of the innate immune response, and by CD4 (MIM 186940) and CD8 (see MIM 186910) cytotoxic T lymphocyte (CTL) effector T cells once antigen-specific immunity develops (Schoenborn and Wilson, 2007 [PubMed 17981204]).[supplied by OMIM
Other Designations	-

Pathway

- Allograft rejection
- Cytokine-cytokine receptor interaction
- Graft-versus-host disease
- Jak-STAT signaling pathway
- Natural killer cell mediated cytotoxicity
- Proteasome
- Regulation of autophagy
- Systemic lupus erythematosus
- T cell receptor signaling pathway
- TGF-beta signaling pathway
- Type I diabetes mellitus
